Case Study

Cost Savings Through Dosing Optimization

The Obstacle

Dosing Without Cost Consideration

Major PBMs will approve Imbruvica at any dosage level (30/30, 60/30, 90/30, 120/30).

PA Logic reviewed a request after a PBM's approval due to a high-dollar limit agreement.

Price Per Unit is \$555 regardless of dose strength. The 280mg dose is the same price as a 70mg dose.

PA Logic's Dosing Optimization for Imbruvica resulted in a cost savings of \$399,600 per year.

The PA Logic Solution

DEPLOY

Intervention

PA Logic Solutions intervened on this request and recommended a dosing optimization.

PA Logic's Intervention Program is a unique and personalized solution, allowing our Pharmacists to work directly with Providers to recommend and advise them on dosing optimization.

The Outcome

PATIENT RECEIVED PRESCRIBED THERAPY

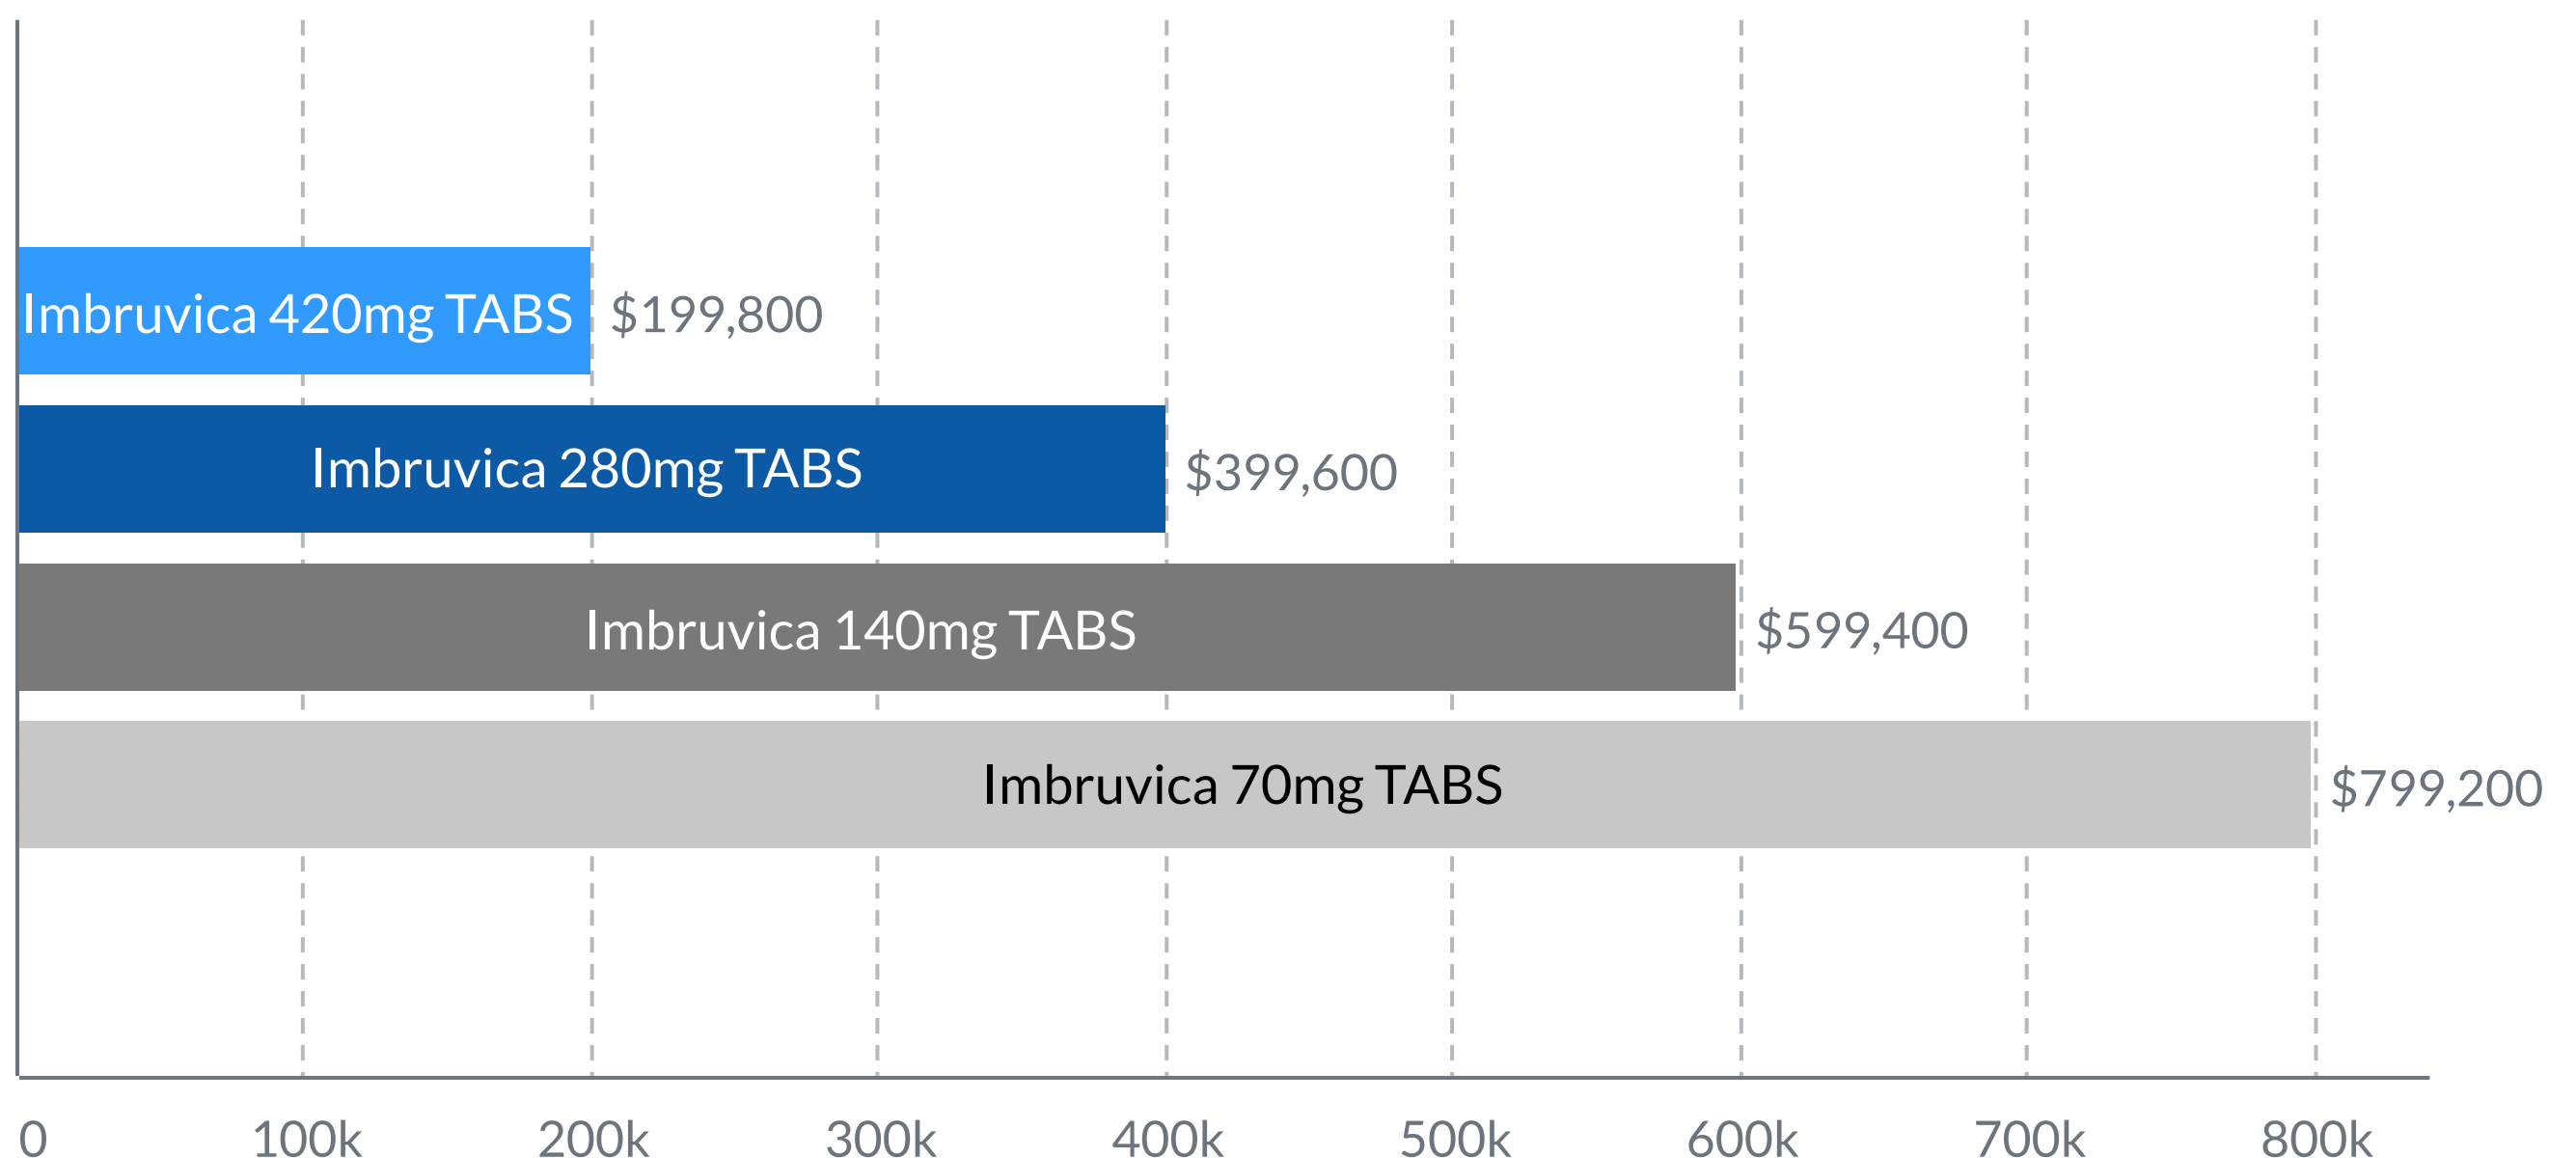

PA Logic worked with the provider and recommended Imbruvica 30/30 of 280mg tablets instead of 120/30 of the 70mg tablets as initially prescribed.

HIGH DOLLAR DRUG COSTS WERE AVOIDED

By placing the patient on the higher dose Imbruvica therapy, PA Logic's Intervention resulted in a cost savings of \$399,600 per year.
